

COURTNEY LAWSON

St. Petersburg, FL (Open to Remote) | courtneyalawson@yahoo.com | courtneylawsonai.com

Implementation and operations professional who builds systems and workflows around how people actually work. Five years of translating business requirements into configured platforms, repeatable processes, user training, and operational improvements across data, legal, and customer-facing environments.

WORK EXPERIENCE

Assistant Portfolio Manager | Invitation Homes, Tampa, FL

Oct 2024 - Present

- Drove a 1,200+ home portfolio to Top 5 national AR performance in 2025 and #1 nationally in Q4 2025 and Q1 2026 through proactive account resolution, early anomaly detection, and balance resolution before rollover.
- Own end-to-end eviction case management with outside counsel, from case submission through court deadlines, settlements, and compliance decisions; prepare discovery and testify at hearings as company representative; supervise two customer service representatives, conduct case audits, and consult with managers and directors across regions.
- Served as a frontline SME for a company-wide legal-operations modernization pilot, advising implementation stakeholders on eviction workflows and success benchmarks while managing 60-100+ concurrent cases; feedback informed broader rollout decisions.
- Designed and deployed a reusable Microsoft Copilot decision-support workflow that translated policy and lease criteria into structured prompts for reviewing completed work orders and vendor documents, cutting review time, speeding abatement referrals for qualifying accounts, and enabling faster follow-up on the rest to reduce escalations; trained the team and built in human review before resident communication.
- Configured a task-oriented Salesforce dashboard that converted the standard list of reports on delinquency, property issues, escalations, utilities, and move-in/move-out activity into at-a-glance charts and graphs, surfacing discrepancies sooner for quick resolution or routing to the team; shared the design with leadership as input for an enterprise APM dashboard redesign.
- Implemented a centralized high-utility resolution workflow tracking 20-30+ active cases from resident report to resolution (credit or confirmed resident responsibility), standardizing intake, billing holds, investigations, maintenance handoffs, and documentation across Excel, Salesforce, and Yardi; reduced lost reports and escalations and gave everyone from CSRs to the portfolio director one shared view of case status.

Student Information Coordinator & Data Manager | Chattahoochee Hills Charter School, GA

Jun 2021 - Oct 2024

- Owned quarterly state reporting and data reconciliation in Infinite Campus, correcting TAG and ESE coding discrepancies affecting funding and compliance; first-year cleanup identified approximately \$500K+ in previously unrealized funding.
- Led implementation of Integrity6, the school's first dedicated lottery platform, from executive business case and requirements translation through vendor configuration, data setup, automated communications, testing, launch, and administration.
- Built and delivered Infinite Campus enablement for 40-50 teachers and staff through live and recorded training, written guides, targeted support, recurring communications, and proactive reporting checkpoints.
- Built the annual Infinite Campus master schedule for 530-565 students, translating academic requirements, staffing constraints, cross-grade enrollment, student needs, and scheduling conflicts into courses, sections, and assignments.
- Served as campus functional administrator for Infinite Campus, independently resolving access, enrollment, duplicate-record, scheduling, grading, attendance, and parent-account issues with minimal district escalation.

PROJECTS

AI Lead Intake Automation

- Built an AI-assisted lead intake workflow in n8n, capturing Tally submissions, applying deterministic business rules and OpenAI API evaluation, structuring outputs in JSON, creating HubSpot records, and triggering Slack handoffs.
- Tested and hardened the workflow for operational use, diagnosing a webhook failure caused by an optional form field and documenting system use, troubleshooting, and escalation in a user guide and support FAQ.

LLM Evaluation

- Evaluated GPT-6 Luna across 100 Sprinklr CXM Agent Quality Adherence cases, using Python in Jupyter Notebook to compare criterion-level judgments against benchmark labels and analyze disagreements for reliability and human-review needs; developed and versioned the evaluation workflow with VS Code and Git.

Tip Out

- Developed an iOS financial-tracking prototype for tip-based and 1099 workers, using Windsurf and Xcode to translate product requirements into working features; managed source code in GitHub, iterated through debugging and testing, and distributed pre-release builds through TestFlight.

CORE SKILLS & TOOLS

Skills: Requirements Gathering · System Configuration · Workflow Design · Process Improvement · Testing & UAT · Change Management · User Training · Stakeholder Management · Vendor Management · Dashboards & Reporting · Data Mapping · Data Cleansing · Prompt Engineering · Technical Documentation

Systems & Integrations: Salesforce · Yardi · Infinite Campus · Integrity6 · HubSpot · n8n · Excel · APIs & Webhooks · JSON

Technical & AI Tools: Python · Jupyter · Git/GitHub · VS Code · OpenAI API · Copilot · ChatGPT · Claude · Gemini · Windsurf · Xcode

EDUCATION & CERTIFICATES

B.S. Information Technology Management | Western Governors University - In Progress

Google AI Essentials · Google Prompting Essentials
