

Lead Qualification Workflow

QUICK USER GUIDE | FRONT OFFICE & CLIENT EXPERIENCE | v1.0

PURPOSE

The lead qualification workflow helps the team respond to new inquiries consistently and prioritize follow-up. New leads are captured automatically, reviewed against defined qualification criteria, and routed based on the information provided. **The workflow supports staff decisions; it does not replace staff judgment.**

WHEN A NEW LEAD ARRIVES

The system captures the inquiry, creates or updates the CRM record, evaluates the submitted information, and assigns a qualification status. Work from the CRM record rather than manually recreating information from the original form.

YOUR ROLE

STATUS	WHAT IT MEANS	WHAT YOU DO
Qualified	Meets the defined qualification criteria.	Review the record and continue the standard consultation or booking process.
Needs Review	There is not enough information to route confidently.	Review the inquiry, clarify missing information if needed, and update the status.
Not Qualified	Falls outside one or more predefined criteria.	Confirm the reason before closing or redirecting the inquiry.
Escalated	Requires human review.	Do not rely on automated guidance. Route to the appropriate team member.

BEFORE CONTACTING A LEAD

Confirm contact information, review the original inquiry and qualification result, check for previous CRM activity or duplicate records, and note any missing or conflicting information.

WHEN TO OVERRIDE THE WORKFLOW

Use human judgment when information is incomplete, circumstances have changed, the classification appears inconsistent with the inquiry, an exception may be appropriate, or the request falls outside the workflow's intended scope. **If you change a system-generated status, document the reason in the CRM.**

IF SOMETHING LOOKS WRONG

Do not create duplicate records or move a lead without documentation. Capture the lead/contact name, current status, expected status, and a brief description of the issue, then send it to the designated workflow owner.

AUTOMATION HANDLES THE REPEATABLE STEPS. AI SUPPORTS INTERPRETATION. YOUR TEAM OWNS THE DECISION.
